EXPLANATION OF FORMAT

The period covered by this issue of the bibliography corresponds to the same months of *Index Medicus*. The journal coverage is limited to journals covered by *Index Medicus*, but the *Endocrinology Index* contains additional subject headings that are not included in *Index Medicus*. The *Endocrinology Index* is arranged in seven sections: 1) Table of Contents; 2) Subject Section; 3) Review Section; 4) Method Section; 5) Author Section; 6) Subject Index; and 7) Author Index.

Subject Section

The Subject Section is for the reader interested in recent literature related to certain broad topics and is divided into eight categories (pituitary, thyroid, etc.). The endocrine pancreas has not been included since it is the subject of another recurring bibliography, *Diabetes Literature Index*. Each category has a preconceived hierarchical organization of subject headings. A particular citation may appear more than once if it deals with multiple topics. Each citation to an article contains the full title, first author, and journal reference. If the article is written in a foreign language, the language is indicated. If the citation is to a review article, the number of references is given.

Author Section

The Author Section provides the reader with a list of keywords or index terms assigned to each citation. Each article appears only once. The citations are arranged alphabetically according to first author and are numbered consecutively. These numbers are then used in the Author and Subject Indexes to enable the reader to identify references with ease. The complete citations (including index terms) are found but only the first three authors are listed. Foreign titles appear in the original language; these titles have been translated into English in the Subject Section. Following each citation are index terms which have been assigned to describe the contents of the article. Index terms appear in capital letters; some of these are accompanied by subheadings which appear in lower case letters. Asterisks (*) identify the index terms under which articles appear in *Index Medicus*.

Subject Index

All of the index terms assigned to the citations appearing in the bibliography are listed, followed by citation numbers which correspond to the numbers in the Author Section. The Subject Index is included for the convenience of the reader who wishes to select articles falling in categories of his own conception. For example, one who is interested in protein binding of a particular hormone could quickly find whether there were any articles dealing with this subject by determining if there were any citation numbers common to the two headings "protein binding" and the name of the specific hormone.

Author Index

The names of all authors are listed, followed by citation numbers which correspond to the numbers in the Author Section.

DISTRIBUTION

This publication is available free to National Institutes of Health grantees and contractors working in the field of endocrinology and libraries of medical schools. Requests from these qualified individuals to receive free copies of this publication must include their grant or contract number and the title of their project. These requests as well as address changes and other communications should be addressed to:

Other individuals and libraries may receive this publication by subscribing directly to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. One year's subscription includes six bimonthly issues. Subscription price per year in the United States and its possessions: $10.00; foreign, $10.00 additional; and $6.75 for a single copy in the United States and its possessions; foreign, $1.70 additional. Payment is required in advance, and check or money order should be made payable to the Superintendent of Documents.

PREFACE

The *Endocrinology Index* is a bimonthly publication of the National Institute of Arthritis, Metabolism, and Digestive Diseases. This selected bibliography which is produced from the National Library of Medicine's Medical Literature Analysis and Retrieval System (MEDLARS), has been initiated to supply those scientists working in the field of endocrinology with a much needed current awareness tool and is intended to help facilitate greater integration of research and clinical efforts in this field.

Endocrinology Index was developed with the support of contract PH43-66-480 in 1966-70 to Vanderbilt University under the direction of Grant W. Liddle. The National Institute of Arthritis, Metabolism, and Digestive Diseases is most appreciative of the fine work in originally developing and editing the *Index* provided by Grant W. Liddle and Victoria Ragin Liddle and for their continuing editorial advice in making the *Endocrinology Index* a most important and necessary component of endocrinology literature within the biomedical research community.

The Secretary of the Department of Health, Education, and Welfare has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through April 30, 1981

[Recent data on the group of melanotropic and lipotropic pituitary hormones (MSH-LPH) and on the brain morphinomimetic peptides (endorphins)] Bertagna X, et al. **Ann Endocrinol (Paris)** 39(3):201–13, 1978 (84 ref.) (Eng. Abstr.) **(Fre)**

SECRETION

Secretion of melanophore-stimulating hormone (MSH) in long-term cultures of pituitary neurointermediate lobes. Semoff S, et al. **Cell Tissue Res** 194(1):55–69, 9 Nov 78

URINE

Disapearance and excretion of labeled alpha-MSH in man. Redding TW, et al. **Pharmacol Biochem Behav** 9(2):207–12, Aug 78

NEUROPHYSINS

Evidence from hydrogen-1 and carbon-13 nuclear magnetic resonance studies that the dissociation rate of oxytocin from bovine neurophysin at neutral pH is slow. Blumenstein M, et al. **Biochemistry** 17(23):4971-7, 14 Nov 78

BLOOD

Collection of blood from the pituitary stalk and portal veins in monkeys, and from the pituitary sinusoidal system of monkey and man. Carmel PW, et al. **J Neurosurg** 50(1):75-80, Jan 79

METABOLISM

Evidence for in vitro release of neurophysin by the rat pineal gland. Reinharz AC, et al. **Experientia** 34(9):1232-3, 15 Sep 78

Investigation of a dopaminergic mechanism for regulating oxytocin release. Seybold VS, et al. **J Pharmacol Exp Ther** 207(2):605-10, Nov 78

SECRETION

Spectrum of lung cancer and ectopic hormones. Yesner R. **Pathol Annu** 13(Pt. 1):207-40, 1978 (109 ref.)

[Maturation of vasopressin in the hypothalamo-hypophyseal system of the developing rat (proceedings) (author's transl)] Sinding C, et al. **Ann Endocrinol (Paris)** 39(3):223-4, 1978 (Eng. Abstr.) **(Fre)**

OXYTOCICS

The oxytocic effect of centrally injected prostaglandins E2 and F2alpha. Fujimoto S, et al. **Jpn J Pharmacol** 28(5):791-3, Oct 78

[Labor induction and synchronized farrowing of swine with synthetic prostaglandins of the F2alpha type] Kostov L. **Vet Med Nauki** 15(3):55-63, 1978 (Eng. Abstr.) **(Bul)**

[Computer evaluation of tocograms following administration of Spasmalgan (denaverin)] Zanke S, et al. **Zentralbl Gynaekol** 100(18):1182-5, 1978 (Eng. Abstr.) **(Ger)**

PHARMACODYNAMICS

[Observations on fetal monitoring] Frontera F. **Arch Ostet Ginecol** 81(4-6):115-47, Jul-Dec 76 (Eng. Abstr.) **(Ita)**

THERAPEUTIC USE

[Programmed delivery] Gitsch E, et al. **Wien Med Wochenschr** 128(21):669-72, 1978 **(Ger)**

OXYTOCIN

Ripening of the uterine cervix and induction of labour at term with prostaglandin E2 in viscous gel. Wingerup L, et al. **Acta Obstet Gynecol Scand** 57(5):403-6, 1978

Conformational studies on [Pro3, Gly4]-oxytocin in dimethyl sulfoxide by 1H nuclear magnetic resonance spectroscopy: evidence for a type II beta turn in the cyclic moiety. Ballardin A, et al. **Biochemistry** 17(21):4443-54, 17 Oct 78

Evidence from hydrogen-1 and carbon-13 nuclear magnetic resonance studies that the dissociation rate of oxytocin from bovine neurophysin at neutral pH is slow. Blumenstein M, et al. **Biochemistry** 17(23):4971-7, 14 Nov 78

ADMINISTRATION & DOSAGE

Induction of labor with oral prostaglandin E2 in normal and high-risk pregnancies. Nelson GH, et al. **Am J Obstet Gynecol** 132(6):642-8, 15 Nov 78

Oxytocin, vasopressin and memory: opposite effects on consolidation and retrieval processes. Bohus B, et al. **Brain Res** 157(2):414-7, 24 Nov 78

ADVERSE EFFECTS

Macrosomia. A proposed indication for primary cesarean section. Parks DG, et al. **Obstet Gynecol** 52(4):407-9, Oct 78

ANALOGS & DERIVATIVES

Affinity of 1,2-substituted oxytocin analogues to the uterus receptor: Free-Wilson and Hansch analysis. Pliška V. **Experientia** 34(9):1190-2, 15 Sep 78
